## SNR 0525-66.1

## 1 Summary

- Common Name: N 49
- Distance: 50 kpc (distance to LMC, Westerlund(1990) )
- Position of Central Source (J2000): ( 0525 59.9, -66 0450.8 )
- X-ray size: 85 " x 65 "
- Description: ??

### 1.1 Summary of Chandra Observations

| Sequence | Obs ID | Instrument | Exposure $_{\mathrm{uf}}$ <br> $(\mathrm{ks})$ | Exposure $_{\mathrm{f}}$ <br> $(\mathrm{ks})$ | Date Observed | Aimpoint (J2000) <br> $(\alpha, \boldsymbol{\delta})$ |

Exposure $_{\text {uf }} \rightarrow$ Exposure time of un-filtered event file
Exposure $_{f} \rightarrow$ Exposure time of filtered event file

- The whole remnant is covered by chip ACIS-S3(CCD_ID=7)
- Subarray was used and it does not cover whole remnant.

- $\mathrm{N}_{\mathrm{H}}=0.34\left(10^{22} \mathrm{~cm}^{-2}\right)$
- Assumed distance: 50 kpc (distance to LMC, Westerlund(1990) )
- nH was derived from the spectrum of the central source
- because observation did not cover the whole remant, some flux values are partial values.

### 1.3 Nearby Sources

| Obs ID | Position (J2000) | Size | Net Count | Count rate | Note |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 747 |  |  |  |  |  |

(note) 1. This nearby source list is incomplete.
All the above sources are originally from the "src2.fits" file which is distributed with standard chandra processing. Only sources with significant count rate and which are clear to visual inspection are included.
2. The size given above is the size of the region used in detecting that source.
3. For each source, background was subtracted from annular region around the source.

## 2 Fit Detail

- See spectrum page for used regions.

## nH was dervide from central source.

### 2.1 Central Object:

- spectrum from central object
- does not fit well in the low energy regime.
- derived nH is rather large compared to the value( 2.5 2.6) given by Hughes et al.(1998) .

```
source=(xswabs * powlaw1d)
reduced }\mp@subsup{\chi}{}{2}=1.1796
nh}=0.4528 10^22/cm^
```

### 2.2 Point Source(2):

- spectum was re-fitted with ignoring energy below 0.6 keV .
- this nH value was used in estimating the flux value.
source=(xswabs * powlaw1d)
reduced $\chi^{2}=0.557086$
$\mathrm{nh}=0.3391 \quad 10^{\wedge} 22 / \mathrm{cm}^{\wedge} 2$

### 2.3 Shell:

- spectrum from shell
- nH was fixed at the value derived above.
- two thermal plsma model.
source $=($ xswabs $*($ xsraymond + xsraymond $))$
reduced $\chi^{2}=20.05$
$\mathrm{nh}=0.337310^{\wedge} 22 / \mathrm{cm} \wedge 2$

### 2.4 Total:

- spectrum from total
- nH and power-law component for point source was fixed at the derived value in the previous fit.
source $=($ xswabs $*(($ powlaw1d + xsraymond $)+$ xsraymond $))$ reduced $\chi^{2}=19.7735$
$\mathrm{nh}=0.337310^{\wedge} 22 / \mathrm{cm}^{\wedge} 2$

## 3 Chandra Images: Band Images

- Left : raw image, binned by $1 \times 1$ pixel
- Right : gaussian smoothed version of above ( $\sigma=2$ pixel)

### 3.1 Wide Band Images

## Total : 300-10000 eV

Soft Band : 300-2100 eV

## Hard Band : 2100-10000 eV

### 3.2 Band images used in true color image.

Red : 300-960 eV

Green : 960-1600 eV

Blue : 1600-10000 eV

### 3.3 Misc.

: 1600-3000 eV

## 4 Chandra Images : True Color

- Individual images are adaptively smoothed.
- Warning : the adaptive smoothing process sometimes produces artifacts.
- convolution method : fft
- kernel type : gauss
- significance ( $\min , \max ):(3,5)$

| RED : | $300-960 \mathrm{eV}$ |
| :--- | :--- |
| GREEN : | $960-1600 \mathrm{eV}$ |
| BLUE : | $1600-10000 \mathrm{eV}$ |

## 5 Chandra Spectrum

- Images show Regions used to extract spectra
- Regions with red strikes are excluded

### 5.1 ObsID 747

- Background was subtracted from the region around the SNR.

## $13-\mathrm{cm}$

$-.13-\mathrm{cm}$ flux density: 0.96 Jy
-. Image from Dickel and Milne(1998)
-. Chandra image has transformed to the same scale of the radio one.

## 7 Images from Survey Missions

- Left : Chandra Image (0.3-10. keV)
- Center : Images from SkyView with the same scale
- right : Images from SkyView with a reduced scale

ROSAT PSPC (2.0 deg): X-ray (0.1-2.4 keV)

$4850 \mathrm{MHz}:$ Radio ( $\mathbf{4 8 5 0} \mathbf{~ M H z}$ continuum)

Digitized Sky Survey: Optical (J or E band images with a few exceptions)

The Two Micron All Sky Survey (H-band): IR (1.65 microns)

The Two Micron All Sky Survey (K-band): IR ( $\mathbf{2} .17$ microns)

The Two Micron All Sky Survey (J-band): IR (1.25 microns)
