

Fig. 4.— 3-dimensional views of the proposed structure: *top* from the side, through the NAL producing outflow; *middle* down the length of the accelerating, BAL-producing outflow toward the continuum source (note the visibility of a large area of the far side of the flow); *bottom* over the top with an unobscured view of the continuum source. The multi-colored disk represents the accretion disk. The small white dots represent BELR clouds embedded in the flow. (The sharp edges are an artifact of the 3-D rendering program.)
